Guess the AI Bill

Real incidents. Real numbers.

PLAY ALONG · SETTLE YOUR SCORE AT BOOTH 29

KUNAL DAS · DEVELOPER ADVOCATE, CAST AI

Five real incidents.

You guess the numbers.

1

I show a real AI incident. Samsung, Uber, Microsoft and more.

2

Shout your guess. Closest number wins the round. Join any time.

3

Settle your score at the CAST AI booth. See the fix live.

ROUND 1 OF 5 Samsung · 2023 KIMCHI · BOOTH 29

How many leaks before Samsung banned AI outright?

Their own engineers pasted confidential code into ChatGPT to debug it faster.

Then it happened again. And again. Within the same month.

SHOUT IT OUT: how many leaks?

3

leaks in twenty days.

Chip source code. Test code. A meeting transcript.

Then a 1,024-byte prompt cap. Then a full ban.

The data never came back. It sat on servers they cannot control.

ROUND 2 OF 5 Uber · 2026 KIMCHI · BOOTH 29

The CTO ran one demo. For two hours. What did it cost?

5,000 engineers were using AI coding tools. Adoption climbed from 32% to 84% in one month.

The CTO sat down for a two-hour demo of the tool.

SHOUT IT OUT: how many dollars?

ROUND 2 OF 5 Uber · 2026 KIMCHI · BOOTH 29

$1,200

in one two-hour demo.

$150-250
average per engineer, per month.

APRIL
the month the 2026 AI budget ran out.

$1,500
the cap per tool they enforce now.

The tool did not fail. Nobody broke a rule. The bill simply arrived.

ROUND 3 OF 5 Microsoft · 2026 KIMCHI · BOOTH 29

Microsoft cancelled Claude Code for its own engineers. When?

The company that knows AI costs best gave its engineers the best AI coding tool. Spend hit $500-2,000 a month.

Then the licenses were pulled. The date was not random.

SHOUT IT OUT: why that date?

June 30.

the last day of Microsoft's fiscal year.

The cost cut lands clean in the new year's baseline.

$500-2,000 per engineer, per month. The CFO noticed.

Three companies, same ending: restrict, cap, cancel.

ROUND 4 OF 5 Everyone · 2025 KIMCHI · BOOTH 29

How much company data flowed into AI tools last year?

Measured across thousands of enterprises, on live network telemetry, for all of 2025.

Every prompt, paste and upload. In terabytes.

SHOUT IT OUT: how many terabytes?

ROUND 4 OF 5 Everyone · 2025 KIMCHI · BOOTH 29

18,033 TB

of company data, in one year.

+93%
more than the year before.

3.6 B
digital photos, same volume.

410 M
DLP violations, ChatGPT alone.

And 39.7% of what employees paste into AI tools is sensitive.

SOURCE: Zscaler ThreatLabz 2026 · Cyberhaven 2026

Last question.
How many of you used AI today?

Hands up. Keep them up if it was company data. Keep them up if it was a personal account. Look around: that is the governance gap, live, in this room.

77% paste data into AI. 82% via personal accounts.

SOURCE: LayerX 2025 report

Every story ended in a ban or a cap.

Slower teams. Same exposure. Bill still real.

You can't predict what AI will do. You can own how it's used:

01

Which model

02

What it costs

03

What leaves the building

That is the job we built Kimchi for. Free and open source.

Kimchi, in one slide.

An AI coding agent, built by the CAST AI team.

ROUTES THE WORK

Cheap models for bulk work. Strong models for review.

CAPS THE BILL

Hard spend caps per user, team and API key.

KEEPS DATA HOME

Zero data egress. Runs in your own Kubernetes.

Open source. OpenAI-compatible. github.com/getkimchi/kimchi

Booth 29

Settle your score. Watch the fix live.

LIVE DEMO

Kimchi routes a task and caps the spend, live.

OPEN SOURCE

Free to use. Find it at kimchi.dev
